The influence of mechanical impedance of the golf club on flight data recorder for an American football.

Aerodynamics of tennis balls – effect of wear.

Dynamic analysis techniques for the design of the ice hockey.

Friction in the sport of curling.

Quality Function Deployment – A means for developing equipment.

The effect of load rate, placement angle, and ice type on the design of snowboards.

A dynamometric platform for load data acquisition in snow sports.

Flight data recorder for an American football.

Instrumentation to monitor dynamic performance of Olym.

Instrumentation of a Concept II rowing ergometer for kin.

Prediction of ground reaction forces in running using un.

Measurement of pinch grip forces during sport climbing.

Dynamic mouth pressure generation during fixed intensity exercise.

An analytic model for fly line flight with gravity and a til.

Line weights for fly rods.

Fly rod spines.

Analysis of fly fishing rod casting dynamics.

Predicting the motion of a flyline during an overhead cast.

Modeling and experimental evaluation of fly rod dynamic.

Quantitative understanding of the fly casting stroke: Mea.

Embracing human diversity through inclusive design of c.

The design of a successive impact device for muscle stren.

Development of a wetsuit material with adaptive insulat.

Parametric design of field hockey sticks.

Design and development of sports equipment for children.

Exploring user-focused design via development of a new i.

Virtual design and evaluation of a polycarbonate face gua.

Evaluation of a training and performance diagnosis devic.

Modelling the long throw in soccer using aerodynamic dr.

Quantifying the trajectory of the long soccer throw-in.

Understanding the aerodynamics of a spinning soccer ball.

Evaluation of soccer ball designs using a soccer ball kicki.

A test method for measuring forces on a full scale spinni.

A fundamental study of an infron curve kick in football.

An automated system for the measurement of soccer ball:

Aerodynamics of tennis balls – effect of wear.

Effects of spin on aerodynamic properties of tennis balls.
Performance prediction and estimation system for tennis
Sensitivity of tennis players to racquet characteristics
Where on the tennis ball to hit the ball to get maximum
Energy analysis of tennis ball-racket collision
Tennis GUT - modelling the game
Accuracy of an automated system for measuring ball rebo
Metal matrix composites: In the driving seat
A finite element study of the mechanics of sports mouthguard
Design and performance of judo mats
Shock absorbing layers for synthetic sports pitches
Correlating playing performance tests with human perception
Performance measurements on synthetic turf hockey pitch
Friction between hand and different surfaces under different conditions
System development for in-situ characterization of horse's foot
Characterisation of 'seams' in carbon-fibre composite golf club
Motion analysis during a maximal performance test of sprinting
Optimisation of bonding for bicycle wheel sandwich structures
The design and testing of a rolling road and indoor track
Safe design of Y-shaped mountain bike frames after field testing
Rider-bicycle interaction dynamics in mountain biking
Measurement of suspension efficiency in mountain bicycle design and calibration of s a dynamometric saddle support
A method for quantifying the rolling resistance of bicycle wheels
Measuring the effect of transmitted road vibration on cyclist performance
Multijoint control of momentum and balance during landing
Modeling the musculoskeletal behavior of gymnasts during vaulting
Determination of foot-springboard interface parameters using angle-driven model
Kinematic and kinetic case comparison of a dangerous and a superior dismount in men's floor exercise
Optimal jumping strategies from compliant surfaces: A two-dimensional model of springboard standing jumps
Optimum performance in tumbling: Optimisation criteria
On innovation of gymnastics frontier technique and their implementation in training
Modeling and real-time strain measurement of the non-urgin vaulting pole
Optimal camber angle in wheelchair athletes
The rolling resistance of racing wheelchair frames
Effect of materials and manufacturing on the bending stiffness of vaulting poles
Cooling effectiveness of cycle helmets
Quantifying power output using cycling frame strain

Development of TOUCH VOLLEY - volleyball tactical system
The design of optimal athletic lanes
Performance indices in the sport of golf
The effect of the CG parameters in a fairway wood by us
The construction of a new evaluation system for the golf club
Measurement of 3-D loci and attitudes of the golf driver
Correcting for local radial deflections when measuring go
Radial property variations in ‘solid’ golf balls and their effect
Kinematical analysis and measurement of sports
The dynamics of the golf swing as measured by strapdown
An experimental and finite element study of the relations
Hoop frequency as a predictor of performance for softball
An instrumented bat for simultaneous measurement of forces
The physics of the trampoline effect in baseball and softball
Comparison of the performance of U. S. and Japanese alu
An instrumented insole for measurement of foot motion
The ground reaction forces of running on different cushion
Determination of shoe and track stiffness for running spes
Traction of studded boots on turf
The evaluation of shoe stability based on the measurement
Three-dimensional motion analysis and inverse dynamic
A study of the 2D dynamic simulation model for the golf
Trajectory analysis and optimum trajectory of a golf ball
The effect of friction coefficient and surface properties on
Experimental evaluation of a 3-D hyperelastic, rate-depen
The effects of different back training systems on different
Effects of ski stiffness on ski performance
Measurement of ski stiffness on ski performance
Flex-behaviour of bindings and boots in snowboard system
Quickest descent line between several gates during alpine
Ski robot system for the study of effective turn motions
Impact analysis of hollow elastic balls
Real time detection of impact positions in table tennis
The effect of structural design on the coefficient of restitution
The normal impact of a cricket ball on a cricket pitch
Evaluating test methods used to characterize softballs
A system for predicting the impact between a ball and a surface
The aerodynamics of mountain bicycles – the role of computation
Multicriterion optimisation of a ski jump
Scanning large geometries for use in computational fluid dynamics
Axial fluid drag on slender cylinders and terminal objects
Reducing the aerodynamic drag of sports apparel: Development
The Nike Swift Spin cycling project: Reducing the aerodynamic drag
Measurement of acceleration and angular velocity of forearm motion
Optimal hand shape for competitive freestyle swimming
Swimming human model “SWUM” to analyze dynamical systems
Dynamic dissipation during bounce of tennis balls
Biomechanical studies on the mechanism of tennis elbow
Effect of string tension on the impact between a tennis ball and racket
Calculation of dwell time for tennis racquets
Computer-aided performance prediction and estimation systems
Are wireless technologies the future for augmented feedback?
Using an interactive, computer-based resource on the science of tennis
Implementing an applied technology programme in World Class sport
Developing a sports technology/engineering degree programme
ReacTec – from laboratory to the slopes – commercialisation of University research
Academia-Industry collaboration: A catalyst for sports performance
